

Overview

What we are

We are a tech-based NFT project, with a website and bots to help users generate Alpha. We also have alpha generating Discord bots anyone can add, including Engage-2-Earn and WL tools. We've recently integrated OpenAI chat bots with Discord, and are focusing on AI tools in our website in the future.

The website and tools provide a search engine that gathers data from private (paid) DAO Discord channels, Twitter accounts, and web3 companies, such as Magic Eden, Famous Fox Federation, and others.

The data is used in different tools we have built for ETH & SOL, such as alerts/calls, alpha, charts, graphs, evaluation, hyperlinks, and keyword searching. Besides the website and discord, you can download our app in the Android and Apple stores.

We have also built a tool to grow and built your community/project called "Engage-2-earn", which can be used by other DAOs too.
